Abstract (en)

[origin: WO2018074974A1] A burglary resistant room partitioning structure comprising a framework (1) of profile rails and panel-shaped building components (2), which are attached on each side of the framework, said framework comprising an elongated first profile rail (3), an elongated second profile rail (4), which is disposed substantially in parallel with the first profile rail, and a plurality of elongated third profile rails (5a-5e), which extend between and are disposed substantially orthogonally to the first and the second profile rail at a predetermined spacing, said third profile rails being disposed in the first and the second profile rail and supporting the panel-shaped building components. The room partitioning structure further comprises a mesh panel (13a-13d), which is disposed between two adjoining third profile rails, which secure the mesh panel between them and fix the mesh panel in its position in the room partitioning structure. The invention also pertains to a method of forming such a burglary resistant room partitioning structure.
