Abstract (en)

[origin: WO2018073230A1] Exemplary embodiments relate to apparatuses, methods and computer programs for a vehicle and a central office. The apparatus (10) for the vehicle (100) comprises a communication module (12), configured for communication with a central office (200). The apparatus (10) further comprises a computation module (14), configured for controlling the communication module (12). The computation module (14) is further configured for receiving a partial task of a distributed data processing from the central office (200). The computation module (14) is further configured for computing the partial task of the distributed data processing to obtain a result of the partial task. The computation module (14) is further configured for providing the result of the partial task for the central office (200).
