Abstract (en)

The invention relates to a dishwasher basket for cleaning bottles, the dishwashing basket comprising a bottom part, at least one side wall that is connected to the bottom part and that extends substantially perpendicular to the bottom wall, a connection opening extending substantially parallel to the bottom part and having a circumference that formed by an end portion of the at least one side wall, wherein the connection opening of the dishwashing basket is further configured for cooperation with a bottle crate in that at least part of the bottle crate is receivable in the connection opening or in that the dishwashing basket is at least partially placeable in an opening of the bottle crate and a number of projections extending from the bottom part in the direction of the connection opening towards a first end, wherein each projection is insertable into the neck of a bottle that is to be cleaned, and wherein the first end is provided with a number of flow openings that are configured for the passage of cleaning fluid into the bottle. The invention also relates to a method for cleaning bottles.
