Abstract (en)

A container comprises a box; a group of aerosol-generating articles within a first internal volume of the box; a primary lid movable relative to the box between an open position, wherein a primary opening of the container is revealed for extracting at least an aerosol-generating article from the box, and a closed position, wherein the primary lid occludes the primary opening; the box comprising a reclosable extinguishment portion defining a second internal volume separate from the first internal volume, and an extinguishment substrate in the second internal volume; wherein the reclosable extinguishment portion comprises a secondary opening and a resealable adhesive label extending beyond the periphery of the secondary opening and movable between a sealed configuration, wherein the resealable adhesive label occludes the secondary opening, and an open configuration, wherein the resealable adhesive label is at least partly lifted off a surface of the container to reveal the secondary opening.
