Abstract (en)

[origin: CN110184692A] The invention relates to a device (100) and a method for adjusting a working distance (a) between a cylinder (4) with card clothing and at least one adjacent work element (5) in a spinning preparation machine, in particular a carding machine and a carding machine. The cylinder (4) and the work element (5) cooperate at a working distance (a). The working distance (a) between the cylinder (4) and the working element (5) is adjusted or calibrated by means of at least one shape memory alloy element (FGL element 110) during the operation of the spinning preparation machine.
