Abstract (en)

[origin: CN110185345A] The invention relates to a roller running mechanism, in particular to a roller running mechanism for a sliding door and/or a sliding window. The roller running mechanism comprises a running structure with a running surface and at least one running roller capable of rolling on the running surface; the running roller is provided with at least two roller sections with different hardness. The roller sections are arranged next to each other along a rolling axis and are designed to be supported on the running surface, wherein the running surface has a shape course that changes at least in some regions in the longitudinal direction of the running structure, said shape course being designed to influence the contact behavior between each roller section and the running surface in a position-dependent manner.

Abstract (de)

Rollenlaufwerk, insbesondere für Schiebetüren und/oder -fenster, mit einer Lauffläche aufweisende Laufstruktur und zumindest einer an der Lauffläche abrollbaren Laufrolle, die wenigstens zwei längs der Rollenachse nebeneinander liegende, zur Abstützung an der Lauffläche ausgebildete Rollenabschnitte unterschiedlicher Härte aufweist, wobei die Lauffläche einen sich entlang der Längserstreckung der Laufstruktur zumindest abschnittsweise ändernden Formverlauf zur positionsabhängigen Beeinflussung der Kontaktcharakteristik zwischen den einzelnen Rollenabschnitten und der Lauffläche aufweist.
