Abstract (en)

[origin: WO2018077930A1] A drive device for a movable furniture part (3) comprises a latchable pushing-out device (6), by means of which the movable furniture part (3) can be shifted in the opening direction from a closed position by a linearly displaceable driver (12) prestressed by an energy store (22), and also comprises a locking means, by way of which the driver (12) can be locked when the energy store (22) is in the stressed state, wherein an adjustment element (50) can be moved by the driver (12) for the purpose of unlocking the locking means, wherein, for the purpose of unlocking the locking means, the adjustment element (50) can be moved by an actuating element (90) provided on the pushing-out device (6). This makes it possible, in dependence on the installation situation, to use different mechanisms for unlocking the locking means.
