Abstract (en)  
[origin: CA3040321A1] The invention concerns a package (2; 3) for an object, preferably medical, comprising a bottom shell (21; 31); a top shell (22; 32) comprising a closing portion (24; 34), referred to as the lid, and a linking portion (23; 33), in the form of a through body, and linked to the closing portion (24) by a hinge (25) in order to make it possible to articulate the closing portion (24; 34) with respect to the linking portion (23; 33) so as to allow access into the bottom shell (21; 31) through the linking portion (23; 33). The linking portion (23; 33) is provided with a stiffening element (290; 390) and a sealing strip (4; 4') links the edges (241, 231) of the lid (24; 34) and the linking portion (23; 33) that face each other along the entire length of said edges. Said linking portion (23; 33) linking the top shell (22; 32) and the bottom shell (21; 31) consists of two parts attached to each other, preferably by welding.
