Abstract (en)

[origin: WO2018077466A1] The invention relates to a temperature-control system for controlling the temperature of meals in a vehicle, in particular in a plane, comprising a frame for receiving meal containers and an electrically operating oven (1) having an internal chamber (8) for receiving the frame, wherein the oven (1) has at least one transmitter coil (16) and the frame has at least one receiver coil (22), which cooperate to inductively transfer electrical energy, and wherein the frame has at least one heating element that is connected to the at least one receiver coil (22) for energy supply. The invention also relates to an oven for controlling the temperature of meals in a vehicle, a frame for receiving a plurality of meal containers and a method for controlling the temperature of meals in a vehicle.
