Abstract (en)

[origin: WO2018077558A1] The invention relates to a method for operating a machine for producing a fibrous web, comprising a dewatering apparatus having a plurality of pivotably implemented dewatering strips, comprising the following steps: depending on at least one parameter, an angle of inclination of at least one of the dewatering strips is changed, wherein the change is effected by means of a pivoting device which is actuated by a control device, wherein the actual angle of inclination of the at least one dewatering strip to be pivoted is detected and transmitted to the control device, and the control device actuates the pivoting device on the basis of the transmitted angle of inclination.
