Abstract (en)

[origin: WO2018054536A1] Method for securing a locked room (1), which, on forced entry to the room (1), transmits a signal output from a sensor (6) to a switching apparatus of a warning device that triggers an alarm by outputting audible signals and/or light signals and/or wireless signals to a monitoring point, in which the warning device comprises a structural member (2), in which a surface portion (3) facing the entrance (8) to the room (1) supports the sensor (6) for a first alarm stage and a light alarm apparatus (9) and a surface portion (5) facing the room (1) supports the sensors (7 and 7') for the second alarm stage and is provided at least with a delivery point for a chemical repellent.
