Abstract (en)

[origin: EP3316663A1] The invention relates to an induction hob comprising: - a hob plate (2); - two or more induction coils (3) arranged below the hob plate in order to form heating zones (4) at the hob plate (2); - one or more pot detection sensors (5), the pot detection sensors (5) being at least partially placed between a pair of adjacent induction coils (3); wherein the pot detection sensor (5) is a strip-shaped sensor extending in a space between said pair of adjacent induction coils (3) and the pot detection sensor (5) is coupled with an evaluation unit (8) adapted to determine information regarding the coverage of the pot detection sensor (5).
