Abstract (en)

[origin: EP3533534A1] The present disclosure relates to a structure for casting. Defects of a slab may be restricted by effectively forming a concentrated layer containing alloying elements on a surface of the slab using a structure including a support bar mounted to a mold, a hollow partition member having opened upper and lower portions, and a fixing member configured to connect the partition member to the support bar, thereby dividing an inner space of the mold.
