Abstract (en)
This invention is related to a closure device (10) characterised in that it comprises an upper rail (11), a lower rail (12), a pivoting fixed door (3), a cover (4) and a closure element (5). The pivoting fixed door (3) is arranged between the upper rail (11) and the lower rail (12), and comprises an upper profile (31) and a lower profile (32). The cover (4) is fixed to the upper rail (11) and comprises a slot (401). The closure element (5) is fixed to the upper profile (31) of the pivoting fixed door (3) and comprises a first mobile stop (501), such that, in an opening position of the first mobile stop (501), the closure element (5) can pass through the slot (401) of the cover (4) and in a second locking position of the first mobile stop (501), said first mobile stop (501) represents an obstacle to the closure element (5) passing through the cover (4).
