Abstract (en)

An arrangement comprising an internal combustion engine (1) and at least one temperature management device (2), wherein in an operating state of the internal combustion engine (1) the internal combustion engine (1) can be temperature controlled by the at least one temperature management device (2) through supplying a temperature management medium, wherein the arrangement comprises a guiding device (4) by which the at least one temperature management device (2) can be moved between an operation position and an installation and/or maintenance position and that the internal combustion engine (1) can be set into an operating state with the at least one temperature management device (2) in the operation position, wherein the at least one temperature management device (2)- is connected in the operation position to the internal combustion engine (1) by a connection for the temperature management medium and- in the installation and/or maintenance position has an increased distance (6) to the internal combustion engine (1) compared to the operation position.
