Abstract (en)

[origin: EP3534195A1] An optical fiber array with a high reliability, relating to the technical field of optical fibers. The optical fiber array is composed of an optical fiber positioning substrate (1), a cover plate (2) and an optical fiber ribbon (3). A stripped end of the optical fiber ribbon (3) is a naked fiber (4). The naked fiber (4) is pressed, by the cover plate (2), in a microgroove array of the optical fiber positioning substrate (1) and is spliced by a glue layer (5) to be fixed. A transition region between the stripped portion and an unstripped portion of the optical fiber ribbon (3) is spliced by the glue layer (5) to be fixed at the second half portion of the optical fiber positioning substrate (1). The structural design of the optical fiber array is reasonable and novel. By roughening the surfaces of the positioning substrate (1) and the cover plate (2) spliced with glue, the splicing area between the glue and the optical fiber positioning substrate (1), cover plate (2) and optical fiber ribbon (3) is increased to improve the splicing strength, so that the optical fiber array can work in an atrocious environment of high temperature and high humidity without the adhesive failure, ensuring the positioning precision of the optical fiber.
