Abstract (en)  
[origin: EP3534465A1] An electromagnetic shielding arrangement (1), comprising an inner ring (3) extending around a middle axis (M) and having an inner surface (3a) and an outer surface (3b), an outer ring (4) extending around said middle axis (M) and having an inner surface (4a) and an outer surface (4b), wherein inner ring (3) is located at least partly within said outer ring (4) wherein a spacing (5) is provided between the inner ring (3) and the outer ring (4), and an electrically conductive body (6) having a bore (7) with an inner surface (7a), wherein said inner ring (3) and/or said outer ring (4) are at least partly located in said bore (7); wherein a shielding braid (8) of the cable (2) can be mechanically clamped in said spacing (5) between the inner ring (3) and the outer ring (4) such that an electrical contact is provided between said outer ring (4) and said shielding braid (8), and wherein an electrical contact element (9) is arranged between the outer ring (4) and the electrically conductive body (6) in order to provide an electrical contact between the outer ring (4) and the electrically conductive body (6).
