Abstract (en)
[origin: WO2018083146A1] A device (1) for holding at least one container (2), particularly a case, on a transport apparatus (3), containing a retaining bracket (4) for introduction into a recess (11) of the container (2), by means of which the container (2) is retained by the retaining bracket (4) and fastened to the transport apparatus (3), wherein the retaining bracket (4) contains a first and a second bearing journal (13, 14) and a first bearing element (5) for receiving the first bearing journal (13) and a second bearing element (6) for receiving the second bearing journal (14), wherein the first and the second bearing journals (13, 14) can be rotated in the respective bearing elements (5, 6) about a common axis; wherein the retaining bracket (4) can be reversibly positioned in a first and a second plane and wherein the first plane is substantially horizontal and the second plane is substantially vertical, and wherein the retaining bracket (4) can be introduced into the recess (11) of the container (2) when the retaining bracket (4) is disposed in the second plane. The first and second bearing element (5, 6) each contain a recess (15, 16), so the first and second bearing journals (13, 14) can be removed from the respective bearing elements (5, 6) when the retaining bracket (4) is disposed in a removal position.
