Abstract (en)

[origin: WO2018029661A1] The present disclosure relates to a process for reducing the amount of carbon disulphide (CS₂) in a hydrocarbon feed containing C₅-C₈ fractions. The hydrocarbon feed is treated with an amine functionalized anion exchange resin (basic anion exchange resin) to obtain a mixture comprising a liquid fraction containing treated hydrocarbon and a solid mass containing an adduct of CS₂ and the amine functionalized anion exchange resin. The so obtained liquid fraction containing the treated hydrocarbon is separated from the solid mass to obtain the hydrocarbon having CS₂ content less than 2 ppm. The amine functionalized anion exchange resin can be regenerated from the solid mass.
