Abstract (en)
A lamp (1) comprises a light source (10) in the form of an LED strip having a strip length and a strip width, the LEDs being distributed in the direction of the strip length. A lamp body (20) in the shape of a circular segment with a flat base and a convex frame that supports the light source (10), giving it a corresponding arched shape. The lamp (1) comprises a diffusing body (12) placed in contact with the light source (10) and made of a translucent or transparent material so as to diffuse the light emitted by the light source (10). The diffusing body (12) has a substantially parallelepiped shape with a rectangular base, in a proximal wall (14) of the diffusing body (12) facing the light source (10) there being made a recess (16) that houses, with shape-coupling, the lamp body (20) with the light source (10).
