Abstract (en)

[origin: WO2018086720A1] The invention relates to pipettes (1) and a method for adjusting a volume of a pipette to be pipetted in order to improve the handling of a pipette. In the pipette (1) according to the invention, the actuating element (7) for actuating the dropping mechanism (6) for dropping a pipette tip forms a feedthrough (9) for the pipetting button (3). An actuating surface (10) of the actuating element (7) is thus enlarged such that in particular the operation of the dropping mechanism (6) of the pipette (1) is simplified and particularly convenient. Furthermore, according to the invention, the actuating element (7) is coupled to the volume adjustment mechanism (11) of the pipette and the adjustment of the volume to be pipetted by means of the pipette (1) is carried out by means of a movement of the actuating element (7).
