Abstract (en)

[origin: WO2018137876A1] The invention relates to a device (10) and to a method for the additive manufacturing of at least one shaped body (12), said device having at least one process chamber (14) for holding a material, from which the shaped body (12) can be produced by additive manufacturing, wherein at least a partial region of the process chamber (14) is bounded by a plurality of bar elements (20, 21), which can be move at least in a translational manner relative to each other.
