Abstract (en)

[origin: WO2018134054A1] The invention relates to a coupling system (1) for a rail vehicle, comprising radially clampable coupling portions (7,8). Clamping is effected by a shell-type sleeve (6) with a corresponding centering surface (30). Positively locking surfaces (22, 22', 23, 23') are provided in the region of the coupling portions (7,8) for the purpose of transmitting tensile and pressure forces, against which complementary positively locking surfaces (28) of the shell-type sleeve (6) can be applied free of play.
