Abstract (en)

[origin: WO2018137907A1] The invention relates to a pivot bearing (1) comprising two fastening elements (2, 3), mounted so that they can pivot relative to each other, for fastening the pivot bearing (1) to a vehicle and to a side flap. In order to prevent the pivot bearing (1) from rattling when closed, the pivot bearing (1) has a resilient element (4) which pushes the fastening elements (2, 3) away from each other when the pivot bearing (1) is closed.
