Abstract (en)

[origin: WO2018086641A1] The invention relates to a method for remote spa management, in which the control system of a respective spa communicates with a remote server through a public data network, whereby during this communication the spa (1) sends data on its operation and the operation of at least some of its components to the remote server (7). The control system (3) of the spa (1) sends its identification data to the communication address of the remote server (7), the data being stored by the control system of the spa (1) in its storage means, and subsequently the remote server (7) recognizes the specific communicating spa (1) according to the identification data of this spa (1), which are stored by the remote server (7) in its storage means, whereupon the control system (3) sends the data on the operation of the spa (1) to the remote server (7), which logs these data to the respective spa (1), whereby the remote server (7) is further provided with means of connecting the user (8) and of displaying the logged data regarding the respective spa (1) to the user (8). The invention also relates to a system for performing the method for remote spa management.
