Abstract (en)

[origin: EP3540289A1] Provided are a device and system for monitoring a gas level of a liquefied petroleum gas cylinder. The monitoring system comprises a detection device and a level indication terminal. The detection device comprises a supporting means for supporting a liquefied petroleum gas cylinder. The supporting means is provided with a weight measurement element for measuring a weight of the liquefied petroleum gas cylinder. The weight measurement element outputs a measurement result to the level indication terminal. The monitoring system comprises the detection device capable of measuring the weight of the liquefied petroleum gas cylinder and simultaneously feeding back the measured data to the level indication terminal, such that a user can check level information conveniently, and estimate, in advance, a level of a liquefied petroleum gas in a cylinder.
