Abstract (en)

[origin: EP3540292A1] A lighting device (1) comprising a support stem (2) and a lighting cap (3) mounted on said stem (2). The lighting cap (3) comprises a bell (4) having a housing (400), a lighting element (5) at least partially housed in the bell (4), and a central group (6) supporting the lighting element (5) and suitable to fasten the stem (2) to the bell (4). The central group (6) comprises a first portion (61), a second portion (62) and an engagement element (65), arranged therebetween. The central group (6) may be configured in a disengaged configuration and an engaged configuration, wherein the first portion (61) and the second portion (62) are brought together axially and carry out an action on the engagement element (65) which in turn carries out a radial action on the side wall (45) of the bell (4).
