Abstract (en)  
A lighting unit L that comprises a tubular support 1, in which there are defined first 11 and second 12 ends and an axis  $\Gamma$ , a lamp 2 joined to the tubular support 1 and power connection means 3, wherein the power connection means 3 comprise a first cylindrical female or male connector 31 arranged at the first end 11 of the tubular support 1, a second cylindrical male or female connector 32 arranged at the second end 12 of the tubular support 1, the first and second connectors 31, 32 having four poles such that power and control signals can be transmitted between the two lighting units L. The invention also relates to a lighting system that comprises at least two of these lighting units.
