Abstract (en)

[origin: EP3541111A1] Embodiments of the present invention disclose a channel state information processing method and an apparatus thereof. The method includes the following steps: configuring, by a network device, at least one piece of channel state information CSI reporting configuration information and resource configuration information corresponding to the at least one piece of CSI reporting configuration information, where one piece of the CSI reporting configuration information corresponds to at least two pieces of resource configuration information, one of the at least two pieces of resource configuration information is used for interference measurement and includes a channel state information-reference signal CSI-RS resource set, one of the at least two pieces of resource configuration information is used for channel measurement and includes a non-zero power channel state information-reference signal NZP CSI-RS resource, and one CSI-RS resource set corresponds to at least one CSI report; and sending, by the network device, the at least one piece of CSI reporting configuration information and the resource configuration information corresponding to the at least one piece of CSI reporting configuration information to a terminal device. According to the embodiments of the present invention, a system can be scalable, and a case in which excessive downlink transmission resources are occupied can be avoided.
