Abstract (en)

[origin: WO2018090068A1] The invention relates to a closure element (2) that can be inserted into a container opening, which closure element has a cylinder (4) having at least one lateral opening (7) and a piston (10), which can be slid in the cylinder (4) in a sealed manner and which prevents the discharge of a flowable medium from the container (1) in the initial position, wherein the piston diameter is greater than the cylinder diameter, and the cylinder (4) is designed to be elastically expandable at least in one region (6) corresponding to the sliding length of the piston (10).
