Abstract (en)  
[origin: WO2018091019A1] The subject matter of the invention is a gear unit (1) for a wind power plant, having a sun gear (11) which is arranged such that it can be rotated about a rotor axis (10), and which can be coupled to a rotor of the wind power plant, and wherein a plurality of satellite units (12) are arranged distributed over the circumference of the sun gear (11), which satellite units (12) are operatively connected to the sun gear (11) and can be driven via the generators (13) which can be assigned to the satellite units (12). According to the invention, the satellite units (12) have two splined shafts (14), which are in engagement in each case with the sun gear (11), and an output shaft (15), wherein the output shaft (15) is in engagement with the two splined shafts (14) and can be coupled to an associated generator (13), and wherein the satellite units (13) are of modular configuration and are arranged releasably on the sun gear (11).
