Abstract (en)

[origin: WO2018091108A1] Building facilities and outdoor areas are frequently monitored by sensors. The invention relates to a monitoring device (1) for monitoring a monitoring region (2), having at least one input interface (5) for receiving input data and at least one output interface (13) for outputting output data, having a user interface (9) for selecting and/or for providing a rule (10), wherein the rule (10) comprises rule components (10a -10), having a translation device (11) for translating the rule (10) into an algorithm which can be executed on a computing unit, having an attribution apparatus (6), wherein the attribution apparatus (6) comprises objects, attributes, input data, and/or output data, wherein the attribution apparatus (6) is designed to allocate attributes to an object and/or to save the attributes for the object.
