Abstract (en)

[origin: WO2018091422A1] A plug connector part (1), in particular for transferring a charging current to charge an electric vehicle, comprises a housing part (2), which has a plug opening (21) for plugging in a counter-plug connector part (5) for connection to the plug connector part (1), and a base part (3), which can be connected to the housing part (2), and at least one contacting device (31) for making contact with the counter-plug connector part (5). Here, there is provision that the housing part (2) has at least one first form-fitting element (24) and the base part (3) has at least one second form-fitting element (32), wherein the base part (3) can be applied to the housing part (2) in a mounting direction (M) for connection to the housing part (2) and, to fix the connection, can be rotated relative to the housing part (2) in a direction of rotation (S) directed around the mounting direction (M) in such a way that the at least one first form-fitting element (24) of the housing part (2) and the at least one second form-fitting element (32) of the base part (3) come into form-fitting engagement with one another. In this way, a plug connector part is made available which allows simple mounting of the plug connector part and at the same time ensures a firm connection between the housing part and the base part.
