Abstract (en)

[origin: WO2018093609A1] Disclosed herein are system, method, and computer program product embodiments for the automatic display of closed captioning information. An embodiment operates by accessing user behavior information for a program. It is determined, based on the user behavior information, that multiple closed captioning requests overlap during a portion of the program. A start time indicating when to begin and an end time indicating when to end display of closed captioning information for the overlapping portion is calculated. The program including the start time and the end time corresponding to the overlapping portion is provided for playback, wherein during a playback of the program, the closed captioning information is automatically displayed between the start time and the end time.
