Abstract (en)
[origin: CN110281667A] The invention relates to an auxiliary device (2) for mounting a machine (1, la-c) used for processing substrates on a floor (4). The auxiliary device comprises a multi-piece floor plate (5), including an opening (8) or a recess (9) for adjusting legs (10, 10a-c) of the machine (1), and guiding pieces (11, 12, 14) for lines (13, 13a-d) of the machine. The invention also relates to a system (3) and a method, both of which are based on the auxiliary device (2). The invention advantageously enables: the machine for processing the printing material is installed on the floor in the shortest possible time, precisely and without problems, and in particular a defined length of the line is laid.
