Abstract (en)

The invention relates to a sight positioning mechanism (1) for guns comprising a front sight component (7), a rear sight component (8), and an anchoring mechanism (3), wherein the anchoring mechanism comprises a plurality of fixture points along a longitudinal axis (10) of a barrel for the front and rear sight components (7, 8) and the front and rear sight components (7, 8) are separately mountable at the fixture points of the anchoring mechanism (3) with variable relative distances to each other and at variable positions relative to an aiming eye of a gun operator.
