Abstract (en)

[origin: JP2019164130A] To provide an annular rotation bezel system which is small in dimension, which can be assembled and produced easily.SOLUTION: An annular rotation bezel system 6 rotatable on a middle part 4 of a watch case 2 is provided, in the watch case 2, a timing tool movement extending in a plane is stored, the annular rotation bezel system comprises: a rotation bezel 14; an annular holding ring 16; a ring 18 with a tooth; and at least one elastic arm 20, a free end 38 of the elastic arm 20 is engaged to the ring 18 with a tooth elastically in a radial direction, the ring 18 with a tooth and at least one elastic arm 20 are held in an axial direction vertical to a plane of a movement by the annular holding ring 16 in the bezel 14, any one of the ring 18 with a tooth and the elastic arm 20 is coupled to the rotation bezel 14 in an angular state, and the other thereof is coupled to the middle case 4 in an angular state, the elastic arm 20 is formed of a flat strip spring attached in the system 6 by a cantilever structure.SELECTED DRAWING: Figure 1
