Abstract (en)

[origin: JP2019164131A] To provide an annular support ring capable of securing preferable brake torque between a rotation bezel and an outer wall of a middle case, controlling a noise generated in rotation of the bezel, and guiding rotation of the rotation bezel preferably, around the middle case. SOLUTION: An annular support ring 16 for a system 6 of a rotation bezel 14 is configured to cooperate with an external cylindrical surface 8 of a middle case 4 of a watch case 2, for allowing rotation of the rotation bezel 14 on the middle case 4, the annular ring 16 comprises means 26 for guiding rotation of the rotation bezel 14 around the middle case 4, the annular ring 16 further comprises means 28 for braking rotation of the rotation bezel 14 around the middle case 4 and attenuating sound of the rotation. SELECTED DRAWING: Figure 1

Abstract (fr)

L'invention concerne une bague annulaire (16) de maintien d'un système (6) de lunette tournante (14), destinée à coopérer avec une surface extérieure cylindrique (8) d'une carrure (4) de boîte de montre (2) pour permettre la rotation de la lunette tournante (14) sur la carrure (4), la bague annulaire (16) comprenant des moyens (26) de guidage en rotation de la lunette tournante (14) autour de la carrure (4) ; dans laquelle la bague annulaire (16) comprend en outre des moyens (28) configurés pour freiner la rotation de la lunette tournante (14) autour de la carrure (4) et pour amortir le son.
