Abstract (en)
[origin: WO2019179900A1] The invention relates to a coin storage unit comprising a housing and a plurality of coin tubes arranged exchangeably in the housing, wherein locking means for the coin tubes are provided and can be actuated between a locking position locking the coin tubes against removal from the housing and an unlocking position releasing the coin tubes for removal from the housing. The locking means are, in each case, arranged between two adjacent coin tubes in the housing and, in the locking position, lock the adjacent coin tubes against removal from the housing, the locking means being able to assume the locking position only when the adjacent coin tubes are fully inserted into the housing.
