Abstract (en)

[origin: WO2018096256A1] The invention concerns a headrest comprising two rods (2) provided with locking notches (3) that are mounted so as to be able to slide in a housing (4) with a locking device comprising two locks (5), said locks being mounted so as to be able to slide longitudinally, each of said locks being provided with a receiving face (7), the locking device further comprising a bar (9) mounted so as to slide transversely in said housing between a locked configuration and an unlocked configuration, said bar supporting each of said receiving faces in such a way as to slide thereon when it is actuated from one configuration to the other, and being provided with an actuation surface (10) cooperating with at least one complementary surface (11), said surfaces being arranged such that the shifting of said bar from the locked configuration of same to the unlocked configuration of same actuates said locks from the locked position of same to the unlocked position of same.
