Abstract (en)
[origin: WO2018096214A1] An apparatus for underwater marine vessel maintenance may traverse along a ferrous surface (100). The apparatus has a continuous track (130) that clings to the ferrous surface (100) with electromagnets, while the apparatus executes maintenance tasks to the hull of the vessel. The apparatus may comprise arms that enable clinging to the ferrous surface (100) or clamping arms for attaching the apparatus to a propeller blade. One aspect discloses an apparatus for underwater marine vessel maintenance, wherein the vessel is equipped with a podded propulsion system (901).
