Abstract (en)
[origin: WO2018096375A2] The invention relates to a method for determining the receptive or non-receptive status of the endometrium using a biological sample from a subject of reproductive age, preferably from a human female patient. Moreover, the invention relates to a test kit suitable for performing the method, as well as the use of oligonucleotides suitable for the amplification of gene sets for the determination of the receptive or non-receptive status of the endometrium.
