Abstract (en)

[origin: WO2018095520A1] A handle bearing for a door handle or window handle (2) having a main handle part (21) and a handle neck (22), in particular for commercial property, has a lower rosette (4) that can be attached in a non-rotational manner to a side of a door leaf or window frame, a covering rosette (3) that covers the lower rosette (4) on the side facing the handle (2), and a profile pin (7) that can be rotated about its longitudinal axis to actuate a door or window lock, wherein the profile pin (7) extends through bearing openings (32, 42) in the lower rosette (4) and in the covering rosette (3) into a front-face opening (23) of the handle neck (22), wherein in the bearing opening (42) of the lower rosette (4) a bearing flange (8) surrounding the profile pin (7) is attached, which bearing flange has, on its side facing the handle (2), a neck portion (81) that can be inserted in the front-face opening (23) of the handle neck (22) to fasten the handle (2) to the profile pin (7), wherein the bearing flange (8) has two spring stops (86) arranged between the neck portion (81) and a sleeve portion (84), wherein a spring element (10) circumferentially surrounding the bearing flange (8) at the spring stops (86) abuts spring stops (48) of the lower rosette (4) in a manner that is clamped and secured against displacement. A door handle or window handle having a handle bearing is also described.
