Abstract (en)
[origin: WO2018095486A2] The invention relates to a scanning module (100) for a light scanner (99), comprising a base (141) and an interface element (142) that is configured to secure a mirror surface (151). The scanning module (100) also comprises at least one support element (101, 102) that extends between the base (141) and the interface element (142) and has an extension perpendicular to the mirror surface (151) of no less than 0.7 mm. The base (141), the interface element (142) and the at least one support element (101) are made as a single piece.
