Abstract (en)

[origin: KR20180058608A] The present invention relates to a vehicle control device provided in a vehicle and a control method of the vehicle. According to the present invention, the vehicle control device controls a vehicle having a sensing unit and is provided in the vehicle. The vehicle control device comprises: a communication unit receiving a map, composed of a plurality of layers, from a server; and a processor generating a control signal for driving the vehicle using the map. A control region serving as a criterion for generation of the control signal around a position of the vehicle may be differently defined according to a preset criterion. Therefore, the vehicle control device can define the control region with various criteria.
