Abstract (en)

Provided is a strap that prevents handles from slipping down from the shoulder. The strap (1) is capable of being hooked, from the front side and the back side of a user, on the handles (52) of a bag hung over the shoulder by passing under the armpit on a side opposite to the side where the handles (52) are. Preferably, the strap (1) has a first engagement portion (21, 31) provided on at least one end portion and a second engagement portion (22, 32) provided at a location different from the first engagement portion (21, 31) and capable of engaging with the first engagement portion (21, 31), and the handles (52) pass through the inner sides of rings formed by engagement between the first engagement portion (21, 31) and the second engagement portion (22, 32), and thereby the strap (1) is capable of being hooked on the handles (52).
