Abstract (en)
[origin: EP3546148A1] The present invention relates to a personal care device, in particular skin treatment device such as electric shaver, comprising an a working head attached to a handle for moving the working head along a skin surface, said working head including at least one working tool defining a skin contact contour of the working head, wherein said at least one working tool is moveable relative to said handle under a skin contact pressure by means of a support structure to allow for pivoting of the working head's skin contact contour relative to the handle, wherein a biasing device is provided for biasing said working tool. According to an aspect, an adjustment device including an adjustment actuator is controlled by an electronic control unit to adjust pivoting and/or floating stiffness of the working head in response to at least skin contact pressure of the working head detected by at least one detector during handling the personal care device when effecting the personal care treatment.
