Abstract (en)

The present disclosure relates to a top-handle chain saw 1 comprising a housing 3 and a guide bar 5, projecting from the housing in a front direction and carrying a saw chain 7. A top handle 9 on the housing, extends from a rear tower on the housing to a front tower on the housing, and a side handle 15 extends laterally from the top handle. A handguard 17 has a proximal end pivotably connected to the housing 3 and a distal end extending into a space in between the side handle 15 and the guide bar 5. The handguard is moveable between a forward position where a saw chain brake is activated and a backward position where the saw chain brake is released, and is devised such that its distal end in said backward position is located further to the rear, away from the guide bar 5, than the front tower to which the top handle 9 is connected.
