Abstract (en)
[origin: WO2019185812A1] A wash stand (1) comprises a wash basin (2) having a drain opening (3) which opens into a drain chamber (4). In the drain opening (3) there is a screen element (5) which extends over part of the drain opening (3) such that, at least in a lower region (6) of the drain opening (3), a gap (7) is created through which water can flow out of the wash basin (2) into the drain chamber (4). In the drain chamber (4) there is at least one mounting point (8) on which the screen element (5) is supported removably by the at least one mounting point (8). The screen element (5) in the at least one mounting point (8) is mounted pivotably about at least one pivot axis (S1, S2) such that the screen element (5) can be pivoted from a use position into an intermediate position in which the screen element (5) can easily be grasped by a user. From its intermediate position, the screen element (5) can be removed from the mounting point (8) out of the drain opening (3).
