Abstract (en)
[origin: CN110307690A] The invention relates to a household refrigerator (1) comprising: a housing (1a) in which at least one receiving chamber (2, 3) for food is formed; an inner container (5) delimiting the receiving chamber with its walls (7, 8); a plate-type refrigerated goods carrier (6) which can be arranged in the receiving chamber in a non-destructive and releasable manner; and a positioning device (27), by means of the positioning device, the refrigerated object carrier (6) is fixed at least in one spatial direction in the final position. The positioning device (28) is provided with a positioning hook (12); the positioning hook is arranged on the side wall (7) and is oriented to extend into the receiving chamber from the side wall (7) when viewed in the width direction (x) of the household refrigeration appliance (1). The positioning device (27) has a hook receptacle (20), into which the positioning hook (12) sinks from below, and wherein the positioning hook (12) is covered at least on the front side by the refrigerated goods carrier in a final position in which the position of the refrigerated goods carrier is fixed.
